## SUMMARY

I'm software developer, focused on backend development. I have coded in several languages, mainly PHP and Javascript. Now, I'm involved in Golang, but I'm open to learning new other languages and technologies.
When it comes to work, I'm a team player. We all have something to contribute!

## EDUCATION

**Computer Science Engineering**
University of the Basque Country | Sep 2011 - Jul 2015

## WORK EXPERIENCE

**Backend Developer**
Paack | Jul 2020 - present

- Build new different backend services such as warehouse management system, drivers app.
- Synchronizing services asynchronously with RabbitMQ and later with Pubsub.
- Build APIs using Graphql.
- Setup Helm charts and github actions for deployments

Go | GCP | GraphQL | PostgreSQL | RabbitMQ

**Software Developer**
Arex | Nov 2018 - Jul 2020

- Created a service (front and back-end) to handle onboarding of the new customers, with different flows and external integrations, like contract generation, signing, notifications and other services.
- Worked on developments around financial data, such as, invoice importing from third parties or financial transactions management.
- Setup deployments, pubsub queues, and other infrastructure stuff.

Go | Node.js | TypeScript | Vue.js | PostgreSQL | Docker | AWS | GPC

**Backend Developer**
Holaluz | Feb 2018 - Nov 2018

- Created from scratch a new managing tool for sales team.
- Build a service to handle automatically rejections from distributors when a customer wants to join.
- Move legacy code to a new service cleaning the code and adding tests, also fix many bugs on legacy code.
- Insfraestructure tasks, such as, create an ansible script to automatize the deployment of Nuxt static apps to Amazon S3.

PHP | Symfony | Laravel | Vue.js | Angular | PostgreSQL | MySQL | AWS

**Software Developer**
Inbenta | Feb 2016 - Feb 2018

**Squad Leader**                                          Jun 2017 - Feb 2018
- Manage and develop a massive content importer from different sources, such as, Web (crawling), REST APIs, Zendesk, Salesforce, Shopify, Discourse... to automatically import contents to the company platform, allowing the client configure it selfs.

**Project Manager & Developer**                          Feb 2016 - May 2017
- Manage projects related to chat-bots, NLP search and ticketing. Talking with clients to analyse the needs and viability
- Develop functionalities for customer adapting company product to each them.

PHP | Vue.js | jQuery | MySQL

### Developer Intern

- I did my first internship at Arin Innovation, a consulting services company.
- My daily work was to talk with clients to get the requirements and develop them. There I learned to apply the knowledge learned to develop with Oracles tools, such as JD Edwards and Oracle DB.
- First I was contracted for one year, when it finished they proposed me to extend the contract.

Oracle | Oracle JD Edwards | Oracle DB | PS/SQL | Oracle BI publisher
