Xabier Martinez

Done is better than perfect

About Me

My name is Xabier Martinez Moreno, I was born in Basque Country in 1993, but moved to Barcelona some years ago.

I'm Software Developer, mainly focused on backend development, but I dont discard any opportunity to learn and work with new tools. About my personality, I'm an ambitious developer, always looking for new challenges. I also love work in team.

I spend my free time between learning new things to improve my self as developer, and doing sport, as it gives me the opportunity to beat myself.

Experience

Software developer

Nov 2018 - Present

Arex Markets

Working as a software developer on Node.js and Golang microservices on back-end and Vue.js on front-end. Now, we are working on migrate a monolith into microservices while we improve current functionalities.

Go	Javascript	Node.js	TypeScript	Vue.js	GCP

Backend developer

Feb 2018 - Nov 2018

Holaluz

At Holaluz I was hired as PHP backend developer but finally I worked as Full Stack developer, also I had the opportunity to play with system automation stuff like Ansible. I worked in the team that developments were for the sales team. Apart from made new features in the current platform and fix some legacy code. We started to create a new platform that will handle all sales requirements. I used different PHP frameworks, as Symphony, Laravel and Zend, and PostgreSQL for DB

Squad leader

Jun 2017 - Feb 2018

Inbenta

Later Inbenta tech department was restructured, and some of us were promoted to a new team to productivize company. I was assigned the "Content Digest", a massive importer from different data sources, like, web crawling, Zendesk, Salesforce, Shopify. Also, I created a UI with Vue.js, allowing clients easily to set up his own importer.

Full-stack developer

Feb 2016 - Jun 2017

Inbenta

At Inbenta, a company that provides solutions to bussines with natural processing language integrating in clients websites, I had the opportunity to apply my knowledge of PHP, JS and SQL. I worked for many projects of South American countries and Spain. I created custom chatbots, integrations with facebook and imports from client data to allow process by Inbenta's engine and some ticketing functionalities.

Developer Intern

Oct 2014 - Feb 2016

Arin Innovation

I did my first internship at Arin Innovation, a consulting services company. My daily work was to talk with clients to get the requirements and develop them. There I learned to apply the knowledge learned to develop with Oracles tools, such as JD Edwards and Oracle DB. First I was contracted for one year, when it finished they proposed me to extend the contract.

B.S. in Computer Science

Sep 2011 - Jun 2015

UPV/EHU

During my time in college, I learned, algorithms, modelling (UML, sequence diagrams), testing... but I think the most important I learned to find a way to solve problems. The main technologies I used was Java and MySQL, but also I made some projects with JS, PHP and C.
